

Model: PY-BRKT-030

Horizontal Mounting Bracket for High Gain Directional Antenna

Optional Horizontal Mounting Hardware for one PY-Y-PNF00-12G-01

Product Overview

- LTE Systems from all Network Operators will require two antennas spaced apart and/or crossed polarized for proper operation.
- When the installation site does not have sufficient space to mount the antennas more than a couple meters, (ideally >3 meters), apart, then one antenna will need to be mounted cross polarized from the other.
- This mounting bracket will convert the standard vertical mounting method of the antenna into a horizontal mounting method.
- Outdoor use with excellent performance in harsh environments.
- Pole Mountable with Standard U-Bolts
